PETROLEUM SALES GROUP

CONFIDENTIAL BUSINESS PLAN

Swiss Market Entry & Real Estate Investment Platform

Diversifying petroleum earnings into prime Swiss property

PREPARED UNDER THE DIRECTION OF

Robert Ramseier

DIPL. ARCHITEKT · PRINCIPAL, SWITZERLAND

ZÜRICH · JULY 2026

STRICTLY PRIVATE & CONFIDENTIAL

IMPORTANT NOTICE

Basis of Preparation

This business plan has been prepared for the board and shareholders of the Petroleum Sales Group (“PSG Sales”, the “Group”) to set out the strategy, structure and capital requirements for the Group’s market entry into Switzerland and the establishment of a Swiss real estate investment and development platform.

All financial figures in this document are illustrative planning estimates prepared for internal discussion. They are not forecasts, valuations or offers, and remain subject to project-level due diligence, financing terms, and confirmation by Swiss legal and tax counsel — in particular with respect to the Federal Act on the Acquisition of Real Estate by Persons Abroad (“Lex Koller”).

This document is strictly private and confidential. It may not be reproduced or distributed, in whole or in part, without the prior written consent of PSG Sales.

DOCUMENT	DETAIL
Title	Swiss Market Entry & Real Estate Investment Platform
Status	Draft for discussion — Version 1.0
Prepared by	Robert Ramseier, Dipl. Architekt — Principal designate, Switzerland
Issued for	Board & shareholders, Petroleum Sales Group
Place / date	Zurich, July 2026
Classification	Strictly private & confidential

SECTION 01

Executive Summary

PSG Sales, an international petroleum sales group, will establish a permanent presence in Switzerland and deploy part of its capital into a disciplined Swiss real estate investment and development programme — combining the stability of the Swiss market with the Group's financial strength and an in-house architectural leadership.

The expansion has two mutually reinforcing pillars. First, PSG Switzerland AG will anchor the Group's European petroleum sales and trading relationships from one of the world's leading commodity-trading locations. Second, a dedicated real estate division will invest Group capital into distressed properties, under-valued building plots and repositioning opportunities in the Zurich–Zug–Lucerne economic corridor, creating value through renovation, development and resale.

The platform is led on the ground by Robert Ramseier, a Swiss registered architect, acting as Principal for Switzerland. His mandate brings development management, architecture and design fully in-house — removing the external design margin and giving the Group direct control over cost, quality and permitting from the first site visit to the notarised resale.

Two investment tracks

- ♦ **Short-cycle projects (6–8 months):** acquisition of distressed or under-managed residential and mixed-use properties, high-quality renovation to Swiss finishing standards, and resale — targeting gross project margins of 15–19% per cycle.
- ♦ **Long-cycle projects (approx. 24 months):** acquisition of building plots and obsolete structures, in-house design and permitting (Baubewilligung), new construction or deep repositioning, and unit-by-unit sale as condominium ownership (Stockwerkeigentum) — targeting gross project margins of 22–28%.

Headline plan figures (illustrative)

KEY PARAMETER	PLAN BASIS
Group equity commitment, Phase I	CHF 25'000'000 over 24 months
Senior bank financing (50–60% loan-to-cost)	up to CHF 15'000'000
Total deployment capacity	≈ CHF 40'000'000
Short-cycle projects, years 1–2	6–8 completed renovations
Long-cycle projects, years 1–2	2 developments in permitting / construction
Blended target return on Group equity	14–18% p.a. after platform costs

Petroleum earnings become Swiss bricks: recurring trading cash flow is converted into appreciating, franc-denominated assets under the Group's own design authority.

SECTION 02

The Group & the Swiss Principal

A capital-strong international petroleum group, joined by a Swiss architect-principal who converts local expertise into proprietary deal flow and in-house execution.

PSG Sales — Petroleum Sales Group

PSG Sales is an international group active in the sale, distribution and trading of petroleum products, serving commercial and wholesale customers across its existing markets. The Group generates recurring trading cash flow and now seeks two things from its next expansion step: a European commercial platform in a first-class jurisdiction, and a durable store of value that diversifies Group earnings away from commodity-price cyclicalities.

Switzerland answers both requirements in a single move. Geneva and Zug rank among the world's foremost commodity-trading hubs, and Swiss real estate is one of Europe's most stable long-term asset classes. The Group's expansion therefore pairs an operating presence with an investment programme, each strengthening the other: the trading entity gives substance and banking depth to the Swiss platform, while the property portfolio anchors Group capital in Swiss francs.

The Swiss Principal — Robert Ramseier, Dipl. Architekt

The Swiss platform will be led by Robert Ramseier, a registered architect practising in Switzerland, appointed as Principal for the Swiss market. His role is deliberately entrepreneurial: he originates acquisitions, leads design and permitting, directs construction and renovation, and manages resale — supported by the Group's capital and investment committee.

- ♦ **Origination.** Access to off-market and distressed situations through the professional network of a practising architect: estate liquidations, renovation-backlog properties, foreclosure auctions (Betreibungsamt) and plots with unused building reserves.
- ♦ **Design authority.** Architectural concept, execution planning and interior design are produced in-house, aligning design ambition with investment discipline from day one.
- ♦ **Permitting.** Direct handling of zoning analysis and building applications (Baugesuch / Baubewilligung) with communal and cantonal authorities — the decisive schedule risk in Swiss development.
- ♦ **Execution.** Tendering and supervision of contractors, cost control to SIA norms, and quality assurance to the finishing standard the resale price depends on.

THE IN-HOUSE ADVANTAGE

In a typical Swiss development, external architecture, planning and development fees absorb roughly 12–18% of construction cost, and coordination between owner, architect and contractor is the main source of delay. By holding development, architecture and design inside the platform, PSG retains this margin, compresses decision cycles, and ensures that every franc of capital expenditure is spent where it produces resale value.

SECTION 03

Why Switzerland

A scarce-supply property market inside one of the world's most stable economies — and, at the same time, Europe's natural home for commodity trading.

Macro-economic foundation

- ♦ **Stability.** Triple-A sovereign standing, low inflation, an independent central bank and the Swiss franc's safe-haven status protect invested capital in real terms.
- ♦ **Growth of demand.** Sustained net immigration of qualified labour drives household formation, above all in the Zurich–Zug–Lucerne economic area.
- ♦ **Scarcity of supply.** Rental vacancy stands near historic lows (around one percent nationally, far lower in the economic centres), while restrictive zoning and lengthy permitting keep new supply structurally behind demand.
- ♦ **Financing environment.** Swiss interest rates are consistently the lowest in Europe, allowing conservative but accretive senior leverage on well-underwritten projects.

The opportunity in distressed and under-managed assets

Beneath the headline stability lies a persistent inefficiency: a large stock of post-war buildings with renovation backlogs, energy-standard deficits and outdated layouts, frequently held by private or estate owners without the capital or expertise to reposition them. Rising energy requirements and generational ownership changes are bringing these assets to market — often quietly, before a broker is engaged. For a buyer who can underwrite quickly and execute professionally, the spread between the neglected purchase and the finished sale is the most reliable profit pool in the Swiss market.

Target regions

REGION	PROFILE	PRIMARY TRACK
Zurich (city & agglomeration)	Deepest liquidity, strongest exit pricing, premium finishes rewarded	Short-cycle renovation
Zug	Low-tax corporate hub, executive demand, scarce supply	Both tracks · Group seat
Aargau	Commuter belt value entry, attractive plot pricing	Short-cycle & plots
Lucerne	Lake-region quality of life, robust condominium demand	Long-cycle development
Bern corridor	Stable administrative demand, conservative pricing	Opportunistic

The petroleum platform

In parallel, PSG Switzerland AG establishes the Group's European petroleum sales office in one of the world's foremost energy-trading communities, with unmatched access to trade-finance banks, logistics services and counterparties — commercial substance that also strengthens the real estate division's standing with Swiss lenders.

SECTION 04

Business Model & Corporate Structure

One Swiss holding, two divisions: petroleum sales as the operating anchor, real estate development as the value engine — with the entire property value chain held in-house.

Corporate structure

ENTITY	FORM	PURPOSE
PSG Sales (Group)	Existing parent	Capital allocation, investment committee, consolidated reporting
PSG Switzerland AG	Swiss stock corporation (AG), seat in Zug	Group holding & European petroleum sales / trading office
PSG Immobilien AG	Swiss AG, subsidiary	Real estate acquisition, development, renovation & resale
Project entities	Per-project AG / co-ownership	Ring-fencing of individual developments where size warrants

Incorporation as an Aktiengesellschaft (minimum capital CHF 100'000, of which CHF 50'000 paid in) provides the governance depth Swiss banks and counterparties expect. The seat in Zug combines a competitive cantonal tax regime with proximity to the commodity-trading community; the real estate subsidiary operates group-wide across the target cantons.

The in-house value chain

STAGE	IN-HOUSE CAPABILITY	EXTERNAL PARTNERS
1 · Sourcing	Architect network, auction monitoring, direct-owner approach	Selected brokers, banks' workout desks
2 · Underwriting	Design-led feasibility: zoning reserves, cost, exit pricing	Valuers, structural engineers
3 · Acquisition	Negotiation & transaction management	Notary, legal & tax counsel
4 · Design & permitting	Full architecture & Baugesuch in-house	Specialist planners (HVAC, fire, energy)
5 · Construction	Project & cost management, site supervision	General & trade contractors (tendered)
6 · Sale	Product definition, staging & pricing strategy	Marketing brokers, notary

Revenue model

- ◆ **Development profit** — the core: margin between all-in project cost and notarised resale proceeds on both tracks.
- ◆ **Retained design margin** — architecture and development fees that would otherwise be paid to third parties remain within the platform (calculated at market rates for transparency in project accounting).
- ◆ **Interim income** — rental income from assets held during permitting, and selective retention of finished units where holding yields exceed recycling value.
- ◆ **Petroleum contribution** — commercial margin of the Swiss trading office, which also carries the platform's fixed costs.

SECTION 05

Real Estate Investment Strategy

Buy below intrinsic value, add value through design and execution, sell into scarcity — on two disciplined cycles.

Acquisition criteria

- ♦ **Distressed or motivated situations:** renovation backlog, estate liquidations, foreclosure auctions, bank workouts, partition sales — priced below replacement or comparable value.
- ♦ **Location quality first:** commuting distance to Zurich, Zug or Lucerne, public transport access, and micro-locations with proven resale liquidity.
- ♦ **Value levers we control:** unused building reserves (Ausnützungsreserve), layout and standard deficits, energy retrofits, densification or conversion potential — value created by design, not by market timing.
- ♦ **Size discipline:** CHF 1–4 million all-in for short-cycle assets; CHF 8–15 million total cost for long-cycle developments — large enough to matter, small enough to remain liquid.

Track A — Short-cycle renovation (6–8 months)

PHASE	DURATION	CONTENT
Acquire	Month 0	Distressed purchase, simultaneous design concept & cost frame
Renovate	Months 1–5	Permit-light refurbishment: kitchens, baths, surfaces, energy, layout
Sell	Months 5–8	Staged marketing at renovated-comparable pricing; notarised exit

Track A generates fast capital rotation — the same equity works up to twice a year — and builds the platform's track record with banks, notaries and brokers. Works are scoped to remain within simplified permitting wherever possible, protecting the 6–8 month cycle.

Track B — Long-cycle development (≈ 24 months)

PHASE	DURATION	CONTENT
Acquire & design	Months 0–4	Plot or obsolete structure; in-house concept to building application
Permitting	Months 4–10	Baubewilligung incl. objection management; pre-sales launch
Construct	Months 10–22	New build / deep reposition under in-house supervision
Sell	Months 16–24	Condominium units (Stockwerkeigentum) sold off-plan & on completion

Track B carries the platform's highest margins. Pre-selling 40–60% of units during permitting and construction de-risks the exit and reduces peak equity. The product is deliberately premium: intelligent floor plans, honest materials and energy-efficient building services — the segment where Swiss buyers pay for architectural quality.

PORTFOLIO RHYTHM

Steady state from year two: three to four Track A rotations per year running alongside one to two Track B developments, so that short-cycle profits continuously fund long-cycle equity — a self-reinforcing pipeline with capital never idle.

Underwriting guardrails

Discipline is codified, not discretionary. Every acquisition memorandum is tested against fixed limits before it reaches the investment committee:

GUARDRAIL	LIMIT
Senior leverage	Maximum 60% of total project cost
Underwritten gross margin	Minimum 15% (Track A) · 20% (Track B)
Exit stress test	Profitable at 10% below underwritten exit pricing
Single-project equity	Maximum 25% of committed Group equity
Pre-sales before construction (Track B)	Minimum 40% of units notarised or reserved
Geography	Within one hour of Zurich, Zug or Lucerne

SECTION 06

Illustrative Project Economics

Two model projects, underwritten conservatively at today's market levels. Figures are planning illustrations, not forecasts.

Model A — Short-cycle renovation, Canton Aargau

A 1970s single-family house with renovation backlog, acquired from an estate below comparable value, renovated to contemporary standard in five months and resold to an owner-occupier.

POSITION	CHF
Acquisition price (incl. transaction costs)	1'850'000
Renovation capital expenditure	380'000
Carrying, financing & sales costs	115'000
Total project cost	2'345'000
Resale price (renovated comparable)	2'760'000
Gross project profit	415'000

Margin on cost $\approx$ 17.7% over a 7-month cycle. With 50% senior financing, the return on equity employed is materially higher; two rotations of the same equity per year compound the effect.

Model B — Long-cycle development, Lucerne region

A building plot with an obsolete structure acquired off-market; in-house design and permitting of eight premium condominium units; construction over twelve months; units pre-sold from the permitting phase as Stockwerkeigentum.

POSITION	CHF
Plot acquisition (incl. transaction costs)	3'300'000
Construction cost, 8 units (tendered, incl. contingency)	6'800'000
Soft costs retained in-house (design, development, permits)	950'000
Financing & sales costs	650'000
Total project cost	11'700'000
Sales revenue — 8 units, avg. 1'815'000	14'520'000
Gross project profit	2'820'000

Margin on cost $\approx$ 24.1% over 24 months. Because design and development are produced in-house, the soft-cost line is retained within the platform rather than paid away — raising the effective Group margin above the headline figure.

Resilience of the models

Both models are underwritten to remain profitable under meaningful stress — the discount captured at acquisition is the margin of safety:

SCENARIO	MODEL A MARGIN	MODEL B MARGIN
Base case, as underwritten	17.7%	24.1%
Exit pricing – 5%	11.8%	17.9%
Exit pricing – 10%	5.9%	11.7%
Works cost + 10%	15.8%	17.3%

Profit is engineered at acquisition and secured by execution — the market is asked only to remain stable, not to rise.

SECTION 07

Capital & Financial Plan

CHF 25 million of Group equity, conservatively leveraged, deployed across a self-funding two-track pipeline.

Phase I capital allocation (24 months)

ALLOCATION	CHF	%
Track A — short-cycle renovation programme	9'000'000	36%
Track B — long-cycle developments (equity share)	12'500'000	50%
Platform build-up, studio & working capital	2'000'000	8%
Strategic reserve / opportunity fund	1'500'000	6%
Total Group equity commitment	25'000'000	100%

Senior bank financing of 50–60% of project cost is added at asset level once the platform's Swiss banking relationships are established, lifting total deployment capacity toward CHF 40 million. Leverage is used to enhance rotation, never to stretch underwriting.

Five-year outlook (illustrative, real estate division)

	YEAR 1	YEAR 2	YEAR 3	YEAR 4	YEAR 5
Track A exits	2	4	5	6	6
Track B completions	—	1	1	2	2
Sales revenue, CHF m	5.4	21.8	28.5	41.0	44.5
Gross development profit, CHF m	0.9	4.1	5.6	8.3	9.1
Platform & overhead costs, CHF m	(1.1)	(1.4)	(1.7)	(2.0)	(2.1)
Division result before tax, CHF m	(0.2)	2.7	3.9	6.3	7.0
Cumulative result, CHF m	(0.2)	2.5	6.4	12.7	19.7

Year 1 absorbs platform build-up ahead of the first exits; from year 2 the division is self-funding, with profits recycled into the pipeline. Petroleum trading results of PSG Switzerland AG are additive and not included above. All figures illustrative; no market appreciation assumed.

Funding & repatriation principles

- ♦ Group equity is drawn in tranches against approved acquisitions — never pre-funded idle.
- ♦ Each project is ring-fenced; cross-collateralisation requires investment-committee approval.
- ♦ Profits are recycled in Switzerland during the build-up phase; thereafter, annual distributions to the Group under the Swiss-home-jurisdiction double-tax treaty framework.

SECTION 08

Organisation & Governance

Entrepreneurial on the ground, institutionally governed above — clear mandates, clear approval limits.

Governance architecture

LEVEL	COMPOSITION	MANDATE
Group board	PSG Sales ownership & executive	Strategy, capital commitment, annual plan approval
Investment committee	Group CEO, Group CFO, Swiss Principal	Approval of every acquisition, budget & exit; quarterly review
PSG Switzerland AG board	Group representatives + Swiss member(s)	Swiss statutory governance, banking, compliance
Swiss Principal	Robert Ramseier, Dipl. Architekt	Origination, design, execution & sale within approved budgets

Approval discipline

- ♦ Every acquisition requires a written underwriting memorandum — design concept, cost frame to SIA norms, exit comparables, sensitivity — approved by the investment committee before notarisation.
- ♦ Budget overruns beyond a defined tolerance (5%) return to the committee; monthly project reporting on cost, schedule and sales status.
- ♦ Dual signatures on all property transactions and payments above defined limits.

The Swiss team — lean by design

ROLE	PHASE I	FROM YEAR 2-3
Principal / lead architect	R. Ramseier	R. Ramseier
Architecture & design studio	1-2 architects / draftspersons	3-4 incl. interior design
Project & construction management	1 (shared with Principal)	2 dedicated
Acquisitions & sales	Principal + external brokers	1 dedicated manager
Finance & administration	Fiduciary (outsourced)	1 in-house controller

Specialist engineering (structural, HVAC, energy, fire), legal, tax and notarial services remain external on a project basis — keeping fixed costs low while the value-defining disciplines of design, development and construction leadership stay in-house.

SECTION 09

Legal, Tax & Regulatory Framework

Swiss real estate rewards those who take its rules seriously. The platform is structured around them from the outset.

LEX KOLLER — THE DECISIVE STRUCTURING QUESTION

The Federal Act on the Acquisition of Real Estate by Persons Abroad (Lex Koller) restricts the acquisition of **residential** property by foreign nationals and foreign-controlled companies. For a foreign-controlled group, unrestricted acquisition is generally limited to **commercial-use property** (offices, retail, industrial, hotels), while residential acquisitions require either exemption, permit, or a compliant ownership structure.

The plan therefore treats Lex Koller as a design parameter, not an afterthought: (i) formal legal opinion from specialised Swiss counsel before the first acquisition; (ii) a deal funnel that includes commercial and mixed-use assets which are outside the restriction; (iii) evaluation of Swiss co-investment and ownership structures for the residential programme — including the position of the Swiss Principal — strictly within the boundaries of the Act; and (iv) transaction-by-transaction confirmation with the competent cantonal authority where any doubt exists. Non-compliant structures are void under Swiss law — there is no commercial upside that justifies the risk.

Corporate & tax framework

- ♦ **Incorporation:** AG under the Swiss Code of Obligations; notarial deed, commercial register entry, Swiss-resident board representation; share capital min. CHF 100'000.
- ♦ **Corporate taxation:** combined federal / cantonal / communal rates of roughly 12–14% in Zug and comparable low-tax cantons.
- ♦ **Property gains taxation:** cantonal real estate gains tax (Grundstückgewinnsteuer) applies on resale, with holding-period-dependent rates; frequent trading qualifies the platform as a professional property dealer (gewerbsmässiger Liegenschaftshändler) with corresponding income-tax treatment — modelled into every underwriting.
- ♦ **Transaction taxes:** cantonal transfer taxes and notarial / land-register fees vary by canton and are included in acquisition cost at underwriting.
- ♦ **VAT:** option for VAT on commercial lettings and correct input-tax treatment on construction cost, structured with the fiduciary from project one.

Planning & construction law

- ♦ Communal zoning plans (Bau- und Zonenordnung) define use and density; in-house zoning analysis is the first underwriting step for every asset.
- ♦ Building permits are public procedures with neighbour objection rights (Einsprachen); schedule buffers and early neighbour engagement are standard practice in the plan.
- ♦ Energy regulation (cantonal MuKE standards) increasingly conditions renovations — a cost factor for unprepared sellers, and precisely the expertise premium this platform monetises.

- ◆ Condominium creation (Stockwerkeigentum) is established by notarial deed with land-register entry — the standard exit vehicle for Track B.

Compliance

Anti-money-laundering diligence applies through the involved banks, notaries and, where applicable, financial intermediaries: documented source of funds from Group trading activity, know-your-counterparty checks on sellers and buyers, and payments exclusively through Swiss banking channels.

External advisory panel

A standing panel of Swiss advisors is appointed at incorporation and engaged on every transaction:

ADVISOR	MANDATE
Legal counsel — real estate & Lex Koller	Structuring opinion, transaction documents, permit appeals
Tax & fiduciary partner	Corporate set-up, VAT and property-dealer taxation, accounting
Cantonal notaries	Deeds, land-register entries, condominium constitution
Independent valuation partner	Exit appraisals for every investment-committee submission
Financing banks (2–3 relationships)	Senior project facilities, interim finance, deposit banking

SECTION 10

Risk Analysis & Mitigation

Every material risk is either priced at acquisition, contracted away, or capped by structure.

RISK	ASSESSMENT	MITIGATION
Market correction during hold	Moderate probability, moderate impact on exit pricing	Profit underwritten at purchase, no appreciation assumed; short cycles limit exposure window; pre-sales on Track B; capacity to hold and let at sustainable yields
Lex Koller / regulatory	Low probability if structured correctly; severe if ignored	Specialised counsel before first acquisition; commercial / mixed-use funnel; cantonal confirmation where any doubt; no structure at the edge of the Act
Permitting delay & objections	High probability of some delay on Track B	In-house permitting expertise; early authority & neighbour dialogue; schedule buffers; Track A scoped for simplified procedures
Construction cost overrun	Moderate probability	In-house cost planning to SIA norms; fixed-price / GMP tendering; 8–10% contingency; dual-signature change control
Interest rate movement	Low–moderate; Swiss rates structurally low	Conservative 50–60% leverage; forward fixing on Track B; underwriting stressed at +150 bp
Liquidity of exits	Low in target regions at target price points	Focus on liquid segments (family homes, 2.5–4.5-room condominiums); realistic pricing; broker network alongside in-house sales
Key person (Principal)	Concentrated in build-up phase	Documented processes, deputising architect from year 1, key-person insurance, Group oversight of all files
Currency (CHF vs. group currency)	Translation exposure for the Group	CHF assets funded substantially in CHF; natural hedge via Swiss cost base; hedging policy at Group treasury

The plan's first defence is the price paid; its second, the quality of execution; its third, the balance sheet behind it.

SECTION 11

Implementation Roadmap

From board approval to a self-funding Swiss platform in eight quarters.

PHASE	PERIOD	MILESTONES
I · Foundation	Q3–Q4 2026	Board approval & capital commitment · Lex Koller opinion · incorporation of PSG Switzerland AG & PSG Immobilien AG (Zug) · banking relationships · studio set-up · pipeline building
II · First capital	Q4 2026–Q1 2027	First 2 Track A acquisitions notarised · renovations under way · first Track B plot under exclusivity · petroleum sales office operational
III · Proof	Q2–Q3 2027	First Track A exits — track record established · Track B building application filed · senior financing lines confirmed · Track A rotations 3–4
IV · Scale	Q4 2027–2028	Track B permit & construction start, pre-sales > 40% · 4–5 Track A projects p.a. · second Track B acquisition · first profit distribution assessment
V · Platform	2029 onwards	Two Track B completions delivered · portfolio equity > CHF 30 m · selective income-asset retention · evaluation of French-speaking market entry

Immediate next steps

- ◆ Group board resolution on the Phase I equity commitment of CHF 25 million.
- ◆ Engagement of Swiss legal counsel for the Lex Koller opinion and incorporation mandate.
- ◆ Appointment of Robert Ramseier as Principal and constitution of the investment committee.
- ◆ Opening of Swiss banking relationships for the operating and project accounts.
- ◆ Activation of the acquisition pipeline — first underwriting memoranda to the investment committee within 60 days of incorporation.

Switzerland rewards patience, precision and presence. This plan brings all three — with the Group's capital behind them.
